RE : Cover Letter

Dear (Recipient)

I am Nicholas Turk, a computer science student at Georgia Tech graduating in May of 2025 with a BS in computer science. I am interested in a position as a natural language processing engineer at Tietronix.

I've always been interested in pushing the boundaries of current knowledge and technology. In the past, I worked on developing the PyFEA library, a project at Montana State University that sought to improve performance of non-linear data modeling. I was part of a small team of collaborators that produced the Python library and a research paper over the course of two months, and this experience demonstrates not only technical skill with software engineering, but also my capacity for teamwork and technical communication.

I have also spent much of my education researching computational linguistics. Most relevant to this position, I worked on a social media toxicity classifier project where I acted as team manager, technical writer, and primary data analyst. That project saw me stepping into a leadership position due to my expertise with linguistic data. This project built an interest in linguistic work that I have taken into several other projects on orthography and morphology.

I hope I have made it clear why I am interested in and qualified for this position. Thank you for your time and consideration.

I look forward to any opportunity to discuss the position in the future.

Godspeed.

-TURK Nicholas
